

Safety Car

Created By:

Penyo Krotev and Ivan Shilderov

Functionality of the Web Application:

Insurance-oriented application, which allows simulation of amount and request insurance policies online. The application functionalities are related to three different type of users: public, private and administrators.

The **public part** of application is visible without authentication. It provides the following functionalities:

- Simulate of car insurance offer based on input criteria
- Creation of new account and log-in functionality

The **private part** of application is for registered users only and is accessible after successful login. The main functionalities provided for this area are:

- Send request for approval of offer (request policy)
- Cancel Policy, while its status is “Pending”

- Simulate of car insurance offer based on input criteria
- Users can edit their profile
- List history of user's requests - Users can:
 - Browse through history of requests
 - Sort requests by date
 - Filtrate requests by status

The **administrators** of the system have permission to manage all major information objects in the system. The main functionalities provided for this area are:

- List of requests created in the system:
 - Filter requests by status
 - Filter requests by email of the user, who made them
 - Sort requests by date
 - Sort requests alphabetically
- Upload Multicriteria Table (in Excel format) directly to the Application
- Download the last version of the Multicriteria
- Approval or rejection of the requests
- Send email to the user in case of approval/rejection of the request
